Interpretation: Result indicates either the absence SARS-CoV-2 RNA in the specimen or the presence of RNA below the detection limit of the assay.

Recommendation: a negative result does not exclude the possibility of infection; and interpretation should be combined with the patient clinical and epidemiological data. If necessary, repeat the test in 72 hours or if symptoms develop.

1) The test is based on Reverse Transcriptase- Real time PCR and is used for the qualitative detection of SARS-CoV-2 RNA.

2) Results may be influenced by the stage of infection, quality of sample collected, storage and transportation conditions.

3) Please follow guidelines published by Ministry of Health.
